MATLAB Projects for M337: Linear Algebra, Spring 2019

Visit the [textbook website](#) for supplementary materials including a guide to getting started with Matlab. For additional help, the math department has Matlab TA's. Click for [locations and times](#) when they are available.

The first thing you need to do is to install the LayData toolbox on the computer where you will be using it. Here

are the steps. I will assume that you have Matlab installed or are using Matlab on a campus PC.

- Download the [LayData Toolbox](#).
- Uncompress the file and move the unzipped directory to the location on your computer where you want it.
- Add the toolbox to the Matlab search path. To do this run Matlab, and at the >> prompt, type pathtool to bring up the path management window. Click Add Folder, and select the folder containing the toolbox. Be sure to save it.

Subject	Week Due	Notes
Getting Started with MATLAB	February 4, 2019	Section 14: Some recent versions of Matlab use New -> Script instead of New -> M-file . Do install the Laydata programs and set the path as described in section 16 for next assignment. DO NOT HAND IN.
Practice Row Operations and Reduced Echelon form and ref	February 18, 2019	Note that there are two separate short assignments here.
Lower Triangular Matrices	March 11, 2019	Problem (1c) and (2b) ask you to prove a result about lower triangular matrices. If you have trouble doing this in general, try it first with (2×2) lower triangular matrices, then (3×3) until you see the pattern. For general Matrices, try using the (Σ) notation for the $((i,j))$ entry of a matrix product.
Using backslash to solve $Ax=b$	March 25, 2019	
LU Factorization	April 15, 2019
